Education

Windesheim University of Applied Sciences, Zwolle, The Netherlands

Exchange Student, Data-driven Innovation Department (DDI) | Semester (Fall 2025)

- Participated in a data-driven innovation project/internship focused on optimizing company organizational processes.
- Applied knowledge in Data Science to build and facilitate business solutions for a real client.

Cambodia University of Technology and Science, Phnom Penh, Cambodia

Bachelor of Engineering, Data Science and AI Engineering, Expected Jun 2026 | GPA:3.5

- Awards: **75%** of STEM Genius Scholarship for a four-year bachelor's degree program in 2022.
- Relevant coursework: Advanced Machine Learning, Deep Learning, Natural Language Processing, Data Visualization, Computer Vision and Image Processing, Advanced Data Science, Database, Big Data Technologies

Professional Experience

The Suplacon, Emmeloord, The Netherlands

Sep 2025 - Present

AI Developer Intern

- Converting raw email data into a structured readable format for company ERP's system.
- Built a reliable LLM pydantic model which improved processing time of the manual review process by more than **90%**.
- Continuously evaluating and validate the performance of LLM with different email formats.
- Currently developing an email pipeline system to automatically classify and extract the structured format inside company ERP system, enabling a more faster and more efficient response handling.

Angkor Social Innovation Park, Phnom Penh, Cambodia

Sep 2024 - Oct 2025

Senior Research Officer

- Conduct a market research and competitor analysis, providing data-driven insights for Cambodia SMEs preparing for the highly competitive **I-stories pitching competition** across **25 provinces**.
- Authored and published a strategic blog post titled, "How SMEs can leverage data-driven solution to support their business operation."

Mentor for NextGen Pitching Competition

- Mentored 8 student groups (**25+ students**) through the development and research preparation of their business pitch ideas.

CamTech University, Phnom Penh, Cambodia

Jan - Aug 2025

Model Development Intern

- Applied Machine Learning and Deep Learning concepts to develop Computer Vision solutions for school projects, focusing specifically on **Image Classification** and **Object Detection**.
- Collaborated closely with team member on model research, development, training, and deployment under the school supervision.

Other Projects

Smart Real-Time Rice Disease Detection, August 2025

 [Research Paper](#)

- Designed and deployed BotaniScan, a Smart Real-Time Rice Disease Detection system for farmers.
- The system integrated Transfer Learning (InceptionV3) to achieve up to **98% accuracy** in classifying diseases
- Integrated Grad-CAM visualization to provide users with transparent, verifiable disease detection through heatmap.
- This research paper is currently submitted to the **ASIP 2025 conference** and to the **ICICT 2026 UK conference**.

Dental Detection Disease System, January - September 2025

 [Demo](#)

- Managed the end-to-end data pipeline, including collecting images data, data annotation and creating training/testing datasets for Object Detection models.
- Developed an **object detection** model using **Faster R-CNN** architecture, achieving over **90% accuracy** in bounding box localization and classification of multiple dental diseases.
- Containerized model deployment using Docker and built API backends using FastAPI to enable scalable application serving.

Skills and Languages

- **Skills:** Image Segmentation/Classification, Computer Vision, Large Language Model (LLM), Generative AI, Automation.
- **Languages:** English (IELTs: 6.0), Khmer (Native)
